of facade of a residential five-storey building in Nefteyugansk, district 3, house 2

Nefteyugansk

26.04.2011

The Commission has carried out spring inspection of facade of a residential five-storey house No. 2 in district 3 and has drawn up this Act on the results of the inspection.

In September 2005, Isollat liquid ceramic coating with thickness of 1 mm has been applied on the facade of a residential house for the purpose of thermal insulation.

The survey results are the following:

- the main load-bearing structures of the building are in satisfactory condition;
- there are no mechanical damages, displacement, cracks, deformations in the structures' interfacing nodes, cracking and delamination in Isollat heat insulation coating;
- there are no defects affecting bearing capacity of the main building structures.

Findings of the Commission:

- technical condition of the facade of the residential five-storey building is rated as good;
- thermal insulation coating is in good condition and has high thermal insulation effect;
- the coating stays for long time, and the facade does not require repairing.
