On the results of using Isollat liquid-ceramic coating

Isollat liquid-ceramic coating was used to reduce heat loss in fuel oil in PBC No. 8, V - 20000 m<sup>3</sup>.

Using this material allowed to apply coating reducing heat loss without stopping tank operation for repair and making fire works, which are usually needed when protecting tanks using mineral wool and aluminium.

After application of the coating, the need for heating the product in the tank has reduced.

In addition, the coating acts as corrosion protection.
