### Feedback on the results of using Isollat-02 liquid ceramic coating

In July and August 2005 we carried out work on insulating of 3 tanks  $V=1000 \text{ m}^3$  at the plant of JSC AMUR BEER for storage of water in the street. The material was applied with high pressure spraying units in 5 layers. Material characteristics claimed by the manufacturer (1 liter per  $2 \text{ m}^2$ ) and easy application of the material have proved to be true in the course of work. There were no mechanical changes (cracking, delamination).
